

THE CAUSES AND ECONOMIC IMPACT OF HUMAN MIGRATION:

CASE STUDIES OF MIGRATION FROM THE EASTERN CAPE, NORTHERN CAPE AND LIMPOPO TO THE NINE MAJOR CITIES IN SOUTH AFRICA

Social science that

Kok, P. 2005. *The causes and economic impact of human migration: case studies of migration from the Eastern Cape, Northern Cape and Limpopo to the nine major cities in South Africa*. Final report to the dti. Paper delivered at a dti migration stakeholders' workshop, Pretoria, Department of Trade and Industry, 16 May.

THE CAUSES AND ECONOMIC IMPACT OF HUMAN MIGRATION

To be covered in this presentation

- A brief introduction
- Migration processes and trends
- Migration causes and characteristics
- Implications of migration
- A few conclusions

Social science that makes a difference

THE CAUSES AND ECONOMIC IMPACT OF HUMAN MIGRATION

Introduction (1)

- The three provinces (case studies) of origin are:
 - Eastern Cape
 - Northern Cape
 - Limpopo
- The nine destination cities are:
 - Buffalo City
 - Cape Town
 - Ekurhuleni
 - eThekweni
 - Johannesburg
 - Mangaung
 - Msunduzi
 - Nelson Mandela
 - Tshwane

Social science that makes a difference

THE CAUSES AND ECONOMIC IMPACT OF HUMAN MIGRATION

Introduction (2)

- **Reminder: Only the migration of *people* is covered in this study – not *business/capital***
- **Migration is a highly complex process that takes place:**
 - **not only in response to factors operating at all levels:**
 - **Micro (household/individual) level**
 - **Meso (district/community) level**
 - **Macro (global/national/provincial) level**
 - **but also in both a *spatial* and *temporal* context**

Social science that makes a difference

THE CAUSES AND ECONOMIC IMPACT OF HUMAN MIGRATION

Migration processes and trends (1)

- Migration data from two censuses (1996 and 2001) were analysed for two periods (1992-1996 and 1996-2001)
- The data used were based mainly on the full censuses (Stats SA's 'Community Profiles' for the two censuses)
- Data from the 10% sample of Census 2001 were also used

Social science that makes a difference

THE CAUSES AND ECONOMIC IMPACT OF HUMAN MIGRATION

Migration processes and trends (2)

- **Main findings (1):**
 - Migration is a *selective* process:
 - Migrants are mainly young adults (in their 20s)
 - Migrants are better educated than the populations of not only the provinces from where they moved but also the cities to which they moved

Social science that makes a difference

THE CAUSES AND ECONOMIC IMPACT OF HUMAN MIGRATION

Migration from Eastern Cape, Northern Cape and Limpopo to the nine major cities during the periods 1992-1996 and 1996-2001, by age

*The 1996-2001 figure for the age group 0-4 years is assumed to be the same as for 1992-1996

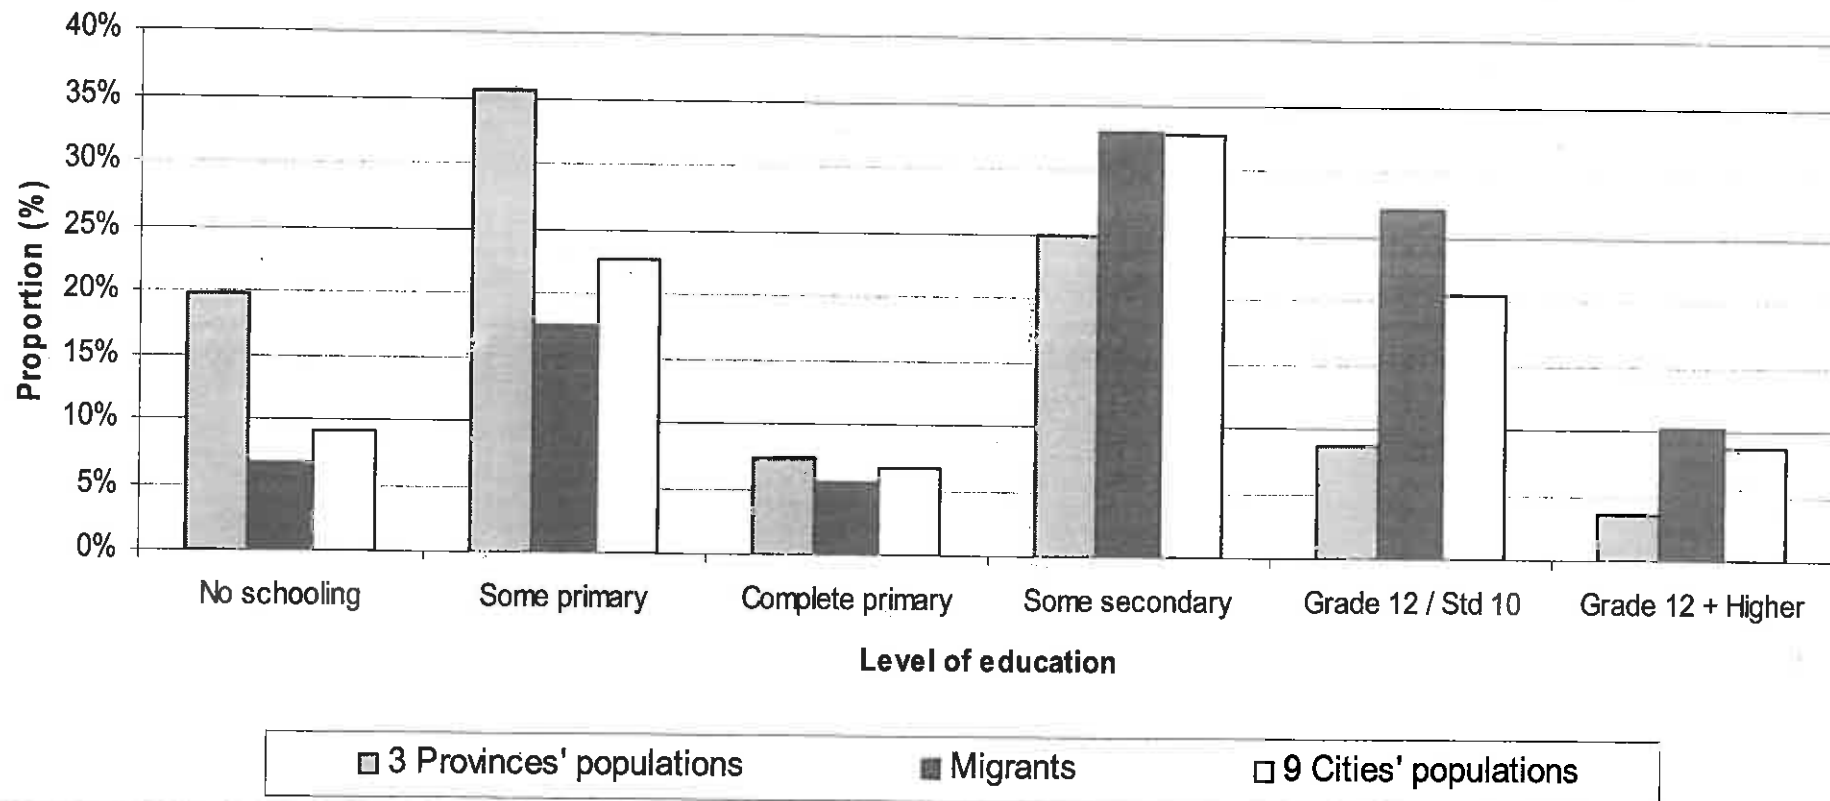

□ 1992-1996

■ 1996-2001

Social science that makes a difference

THE CAUSES AND ECONOMIC IMPACT OF HUMAN MIGRATION

Educational attainment of migrants, as compared to the educational attainment of the populations of the three provinces and the nine cities (in 2001)

Social science that makes a difference

THE CAUSES AND ECONOMIC IMPACT OF HUMAN MIGRATION

Migration processes and trends (2)

- Main findings (2):
 - Migration from the three provinces *increased* notably over the two periods (especially in the age group 20-24 years) – see first graph
 - Migration from Eastern Cape and Northern Cape is centred largely on *Cape Town*, while most migrants from Limpopo tend to end up in *Gauteng* (Ekurhuleni, Johannesburg or Tshwane)

Social science that makes a difference

THE CAUSES AND ECONOMIC IMPACT OF HUMAN MIGRATION

Migration causes and characteristics (1)

- Migration is usually caused by a variety of factors (i.e. hardly ever only one cause)
- Special-purpose surveys are needed to determine the causes of migration
- The data used to analyse migration causes were obtained from the 2001-02 HSRC Migration Survey, which covered 3 618 households/respondents nationally

Social science that makes a difference

THE CAUSES AND ECONOMIC IMPACT OF HUMAN MIGRATION

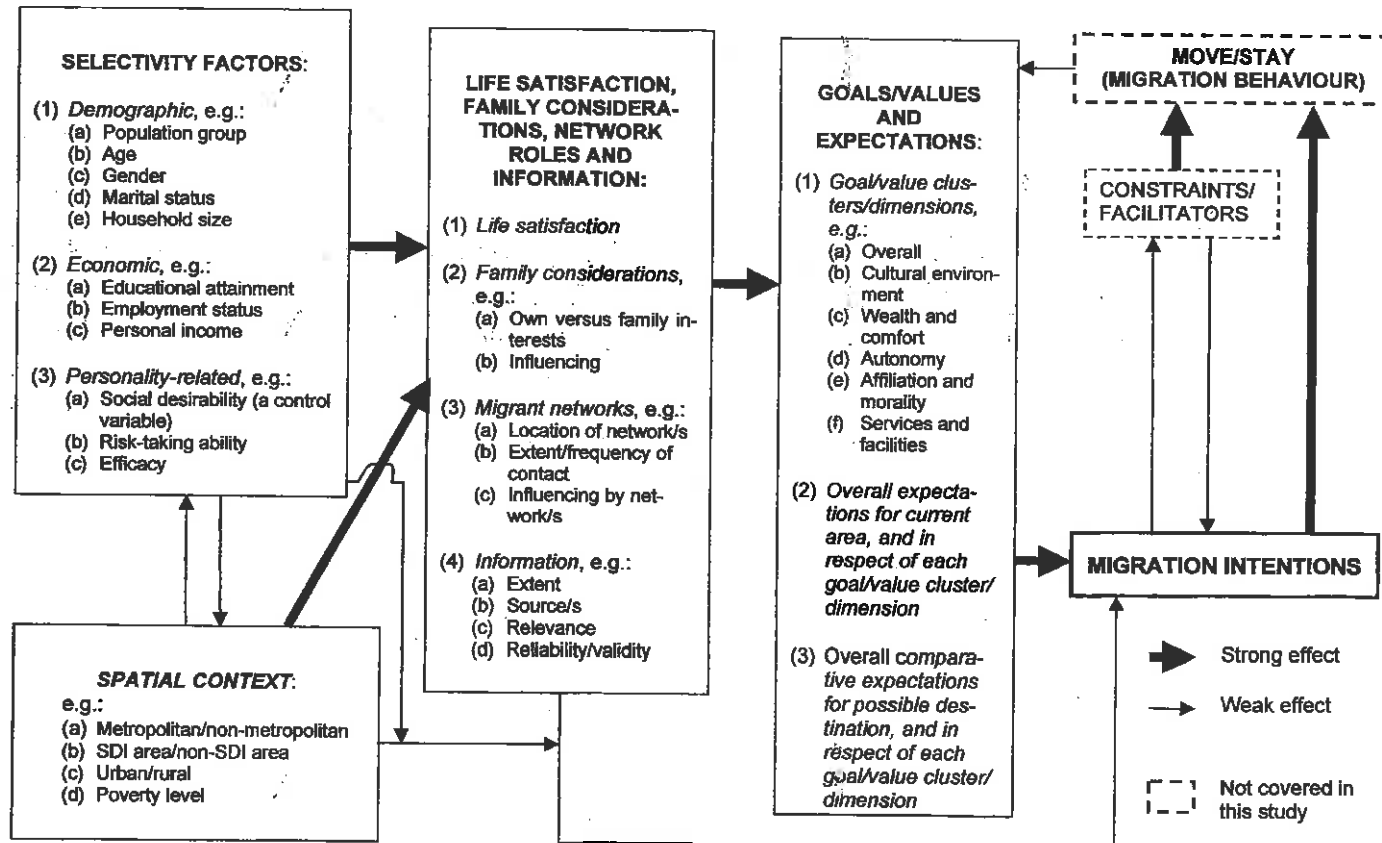

Migration causes and characteristics (2)

- Migration causes can be modelled by studying the factors underlying migration/non-migration *intentions* (as had to be done in this study):
 - to move to another area (migrants)
 - to stay in the same area (non-migrants), but then
 - *in situ* adjustments might have to be made (e.g. by improving or enlarging the current home)
 - expectations might need to be trimmed down (e.g. by having to accept that my children's education will be of a lower quality)

Social science that makes a difference

THE CAUSES AND ECONOMIC IMPACT OF HUMAN MIGRATION

CONFIRMED STRUCTURAL FRAMEWORK FOR AN EXPECTANCY-BASED MODEL OF MIGRATION DECISION MAKING

THE CAUSES AND ECONOMIC IMPACT OF HUMAN MIGRATION

Migration causes and characteristics (3)

- **Modelling results (1)**
 - **Persons who plan to migrate expect the area of destination to better meet their expectations than the place where they currently live (and this was empirically confirmed in this study)**

Social science that makes a difference

THE CAUSES AND ECONOMIC IMPACT OF HUMAN MIGRATION

Migration causes and characteristics (4)

- **Modelling results (2)**
 - **Would-be migrants usually have access to social networks in the destination**
 - **Potential migrants often have more and better information about possible destinations than non-migrants**

Social science that makes a difference

THE CAUSES AND ECONOMIC IMPACT OF HUMAN MIGRATION

Migration causes and characteristics (5)

- Modelling results (3)
 - Would-be migrants are usually dissatisfied with their current circumstances
 - People living in the poorest areas are less able to move away than persons in higher-income areas
 - Migrants are often people who have migrated before

Social science that makes a difference

THE CAUSES AND ECONOMIC IMPACT OF HUMAN MIGRATION

Migration causes and characteristics (6)

- Modelling results (4)
 - Migrants are usually people with (a) higher *risk-taking* abilities and (b) sometimes also higher levels of *self-efficacy* (i.e. ability to 'get things done')

Social science that makes a difference

THE CAUSES AND ECONOMIC IMPACT OF HUMAN MIGRATION

Migration causes and characteristics (7)

- **Modelling results (5)**
 - Migrants are usually the individuals in the family with the best (perceived) ability to make a success of the move to benefit the family (but, interestingly enough, most migration decisions are taken in the migrant's own interest – not necessarily in the family's interests)

Social science that makes a difference

THE CAUSES AND ECONOMIC IMPACT OF HUMAN MIGRATION

Implications of migration (1)

Literature review linked to the study

- **Consequences of migration should be viewed from three perspectives:**
 - The migrant/family (the person/family that moves; micro level)
 - The area of origin (from where the move takes place; meso level)
 - The area of destination (where the move ends; also meso level)

Social science that makes a difference

THE CAUSES AND ECONOMIC IMPACT OF HUMAN MIGRATION

Implications of migration (2)

Migrants and their families (1)

- Migrants are usually satisfied with their decision
- Migrants believe that their living conditions have improved
- Rural-to-urban migrants' children have more opportunities to better themselves

Social science that makes a difference

THE CAUSES AND ECONOMIC IMPACT OF HUMAN MIGRATION

Implications of migration (3)

Migrants and their families (2)

- Although recent urban in-migrants often succeed in finding jobs quickly, the employment that they are willing to accept typically has a high rate of turnover and is easier to get, because such jobs are often:
 - poorly paid and physically demanding or
 - in the informal sector with a less secure income

Social science that makes a difference

THE CAUSES AND ECONOMIC IMPACT OF HUMAN MIGRATION

Implications of migration (4)

The areas of origin (1)

- Migrant labour that involves men migrating alone has many negative consequences, including women having to take over their husbands' farm work in addition to their own
- However, migrants' remittances often constitute a large proportion of rural incomes

Social science that makes a difference

THE CAUSES AND ECONOMIC IMPACT OF HUMAN MIGRATION

Implications of migration (5)

The areas of origin (2)

- With migrants being mostly young adults, rural out-migration *shrinks the labour force and increases the dependency ratio* (i.e. the number of economically unproductive people for every productive person)

Social science that makes a difference

THE CAUSES AND ECONOMIC IMPACT OF HUMAN MIGRATION

Implications of migration (6)

The areas of destination (1)

- With migrants being mostly *young* adults, the cities gain people who are active in the labour force
- A decrease in the dependency ratio of the city is often the result

Social science that makes a difference

THE CAUSES AND ECONOMIC IMPACT OF HUMAN MIGRATION

Implications of migration (7)

The areas of destination (2)

- Housing, infrastructure and service bottlenecks are visible problems of *urbanisation*,
 - which is the product of *urban natural increase* (urban births minus urban deaths) to at least the same extent as
 - *urban net migration* (number of urban in-migrants minus urban out-migrants)

Social science that makes a difference

THE CAUSES AND ECONOMIC IMPACT OF HUMAN MIGRATION

In conclusion (1)

- Migration is a complex process that does not lend itself to simple formulations
- In the study for *the dti* migration has been described and analysed:
 - from the perspective of the three provinces
 - with a view to reporting and understanding:
 - changes in migration volumes and patterns
 - causes of migration/non-migration intentions
 - the impact of spatial development initiatives

Social science that makes a difference

THE CAUSES AND ECONOMIC IMPACT OF HUMAN MIGRATION

In conclusion (2)

- This study was concerned only with the migration of *people*
- *The dti* clearly needs research on the spatial distribution and redistribution of *business/capital* to complement the HSRC's migration research
